***Non-Final Rejection***

***Double patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1, 8-10, 13-15, 42, 44-45, 52-54, 56-57, 64-66, 68-71, and 78-80 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-4 of Patent number 6,644,794. Although the conflicting claims are not identical, they are not patentably distinct from each other because they claim an ink container comprising:

- a collapsible ink reservoir;
- an outer container;
- an insert structure;
- pressure transducer; and
- a three-dimensional formed sheet.

Art Unit: 2861

This is a provisional double patenting rejection since the conflicting claims have not in fact been patented.

***Allowable Subject Matter***

Claims 1-10, 13-15 and 42-81 would be allowable if a terminal disclaimer. These claims would be allowable because none of the prior art references of record discloses an ink container comprising an insert structure including a foam that is disposed in a collapsible ink reservoir for allowing the collapsible ink reservoir to resist collapse of the collapsible ink reservoir, whereby resistance to collapse controls an ink supply pressure versus remaining ink characteristic of the collapsible ink reservoir in the combination as claimed.
